

Vidya - Brand, Design Direction & Copy Deck

Companion to [LANDING-PAGE-BRIEF.md](#). §1 of that brief (hard constraints) applies to every word here. All copy below is written to be true as of 2026-08-19; re-verify against brief §2 before shipping.

1. Brand tokens

Taken from the live app ([apps/mobile/src/screens/study/studyTheme.ts](#)) so the site and the product read as one thing. **Use these exact values.**

Role	Hex	Use
Primary (deep violet)	#6d28d9	Headers, primary chrome, selected states
Primary soft	#ede9fe	Selected option, subtle highlight surfaces
Accent (warm amber)	#f59e0b	Primary CTAs , highlights, active tab
Accent soft	#fef3c7	Accent backgrounds
Accent on	#78350f	Text on amber
Canvas	#f6f5fb	Page background (violet-tinted, not pure white)
Surface	#ffffff	Cards
Surface alt	#efedf8	Recessed surfaces
Ink	#1c1a2e	Primary text
Ink soft	#5f5b72	Secondary text
Ink faint	#a09cb3	Tertiary / captions
Line	#eae7f4	Hairlines
Line strong	#d6d1e6	Emphasised borders
Correct	#16a34a / soft #dcfce7	Right-answer state
Wrong	#dc2626 / soft #fee2e2	Wrong-answer state

Rules.

- Violet is structure; **amber is action**. Never make a primary CTA violet.
- Canvas is violet-tinted, not white - keep that; it's the app's signature.
- The wrong-answer state uses [wrong](#) for the marker but must stay *helpful* in

tone (see §3.2). Red marker, calm words.

- Ship a dark mode; the app has one. Don't invent new hues - derive.

Type. The app uses system stacks. For the site, pick one humanist sans for UI (Inter, or the system stack) and consider a warmer face for headlines only. Numbers appear constantly - use tabular figures for all

statistics.

Motion. Purposeful only: the question card's reveal, the coverage grid's stagger, the exam picker's transition. Respect `prefers-reduced-motion` . No parallax, no scroll-jacking, no autoplaying video.

2. Voice

Vidya's voice is **the voice of the person who wrote the audit**: precise, calm, allergic to hype. It respects a 17-year-old's intelligence.

Do	Don't
"12 chapters are exam-ready. Here's exactly which."	"Complete CBSE coverage!"
"Works with no internet."	"Seamless offline-first experience"
"If they disagree, we don't ship."	"AI-powered accuracy engine"
"3 questions in this chapter so far."	Hide the number
Specific numbers	"Thousands of questions"
Plain verbs	"Leverage", "unlock your potential", "supercharge"

Banned: exam-fear framing ("Only 90 days left!"), rank/percentile promises, "crack the exam", fake urgency, fake scarcity, streak-guilt, any implied guarantee of marks.

Indian English, naturally. "Rs" not "₹" in question text (matches the bank); lakh/crore where natural; "Boards" capitalised; "maths" not "math".

3. Copy deck

Copy is a starting point, not a straitjacket - but every **number** is load-bearing and must come from generated data (brief §7.1).

3.1 Hero

Headline (pick one):

- Practice that works when your internet doesn't.
- Every answer checked twice. Even offline.
- Commerce revision that earns your trust.

Recommended: *Practice that works when your internet doesn't.*

Sub: 3,903 CBSE Commerce and Maths questions - with worked solutions - on your phone, no connection needed. Every numeric answer is verified by a second program that solves it independently.

Primary CTA: Try a question → (scrolls to / opens the live demo) **Secondary:** Get notified at launch

Reference: [Fixa](#) for the calm benefit-led headline + waitlist pairing; [Sketch's "102 is coming"](#) for honest pre-launch framing.

3.2 The playable question

- Prompt label: **"Try one. No signup."**
- Correct state: **"Correct."** + full working. Warm, brief, no confetti.
- Wrong state: **never** "Wrong!" - name the misconception:

> **"That's the figure you get if you forget to multiply by years' purchase. > Here's the full working."**

- Follow-up: "That explanation ships with all 3,895 explained questions."

3.3 Three pillars

	Heading	Body
1	Works with no internet	The entire question bank lives on your phone. Practice on the bus, in a basement, on a dead data pack. Nothing to download mid-session.
2	Answers you can trust	Every numeric answer is re-derived from the question by an independent solver. If the content and the solver disagree, the build fails. 0 duplicates, 0 integrity defects.
3	Built for Commerce	Accountancy and Maths are the deepest chapters here, not an afterthought bolted onto a science app.

3.4 Coverage grid

Heading: 12 chapters are exam-ready. Here's exactly which.

Body: Most apps quote a big number and let you find the gaps yourself. Ours: 3,903 questions across 62 chapters - but they aren't spread evenly. Twelve chapters have 300+ questions each, at three difficulty levels. The rest are being written. This grid is generated from the live question bank, so it's current.

Legend: Exam-ready (300+) · In progress · Not started

3.5 How verification works

Heading: We check our own answers with a second program.

Body: Every numeric question is solved twice - once when it's written, and again by a separate solver that reads only the question text and has no access to the stored answer. If the two disagree, the build fails and nothing ships. Wrong options aren't filler either: each one is a mistake students actually make, so getting it wrong still teaches you something.

3.6 Offline proof

Heading: Don't take our word for it. Turn off your internet.

Body: This page keeps working. So does the app.

3.7 Honest status / roadmap

Heading: Where we actually are.

Body: Vidya isn't on the Play Store yet. The app is built and the question bank is real - you just answered from it - but we're finishing content depth and device testing before release. Leave your email and we'll tell you once, when it's ready. No newsletter.

3.8 Waitlist

Heading: Know when it's ready. **Field:** Your email **Button:** Notify me **Microcopy:** One email at launch. Nothing else, ever. No sharing.

Reference: [ISO Meet](#) for waitlist layout - **but omit its social-proof counter**; we have no signups and must not imply otherwise.

3.9 Meta

- **Title:** Vidya - offline CBSE Commerce & Maths practice
- **Description:** 3,903 verified questions with worked solutions for CBSE

Class 11–12 Commerce, CUET, CA Foundation and IPMAT. Works with no internet.

- **OG image:** wordmark + the three pillars + one real question. No stock photos.

4. Using Mobbin and the design tooling

4.1 Mobbin

The MCP is connected. Useful queries, run one intent at a time:

- `search_sections` - "hero section for a mobile learning app with phone mockup and email waitlist"
- `search_sections` - "interactive product demo section where the visitor can try the product in the page"
- `search_sections` - "pricing or plan comparison" *(only if pricing is added - none exists today)*
- `search_sections` - "FAQ accordion section"
- `search_sections` - "footer with product links and newsletter signup"
- `search_screens` (platform `ios`) - "quiz question screen with multiple choice options and explanation"
- for the phone-mockup content, so the mockup matches the real app.

Already-surfaced references worth revisiting: [MasterClass](#) · [Fixa](#) · [ISO Meet](#) · [Opennote](#) · [monday.com](#) · [The Leap](#)

Use Mobbin for structure and interaction patterns, not for palette - the palette is fixed in §1.

4.2 Design tooling in-session

- The `visualize` MCP (`read_me` then `show_widget`) is good for proposing section mockups inline before committing to code.
- The `anthropic-skills:canvas-design` and `theme-factory` skills are available if a richer design exploration is wanted.
- **Verify in the browser, don't assume.** The Browser pane tools drive the real page: `preview_start` , then `read_page` / `computer` / `resize_window` . Check 375px and 320px, light and dark, and `read_console_messages` before declaring done.

5. Screenshots of the real app

The page needs authentic product shots. The app runs as a web build:

```
cd apps/mobile && npm run dev:web          # webpack dev server, port 8080/8081
```

Then drive it with the Browser pane at a phone viewport (375×812) and capture Home, a Practice question with its worked solution, the coverage of a deep chapter, and a mock exam.

⚠ Two cautions. **(1)** A pre-existing `TurboModuleRegistry` webpack overlay covers the app on load and intercepts clicks - dismiss it before capturing. **(2)** The dev build is *not* the `publicStudy` variant. Capture study screens only, and check every screenshot for private-surface UI before it goes anywhere public. Prefer building the `publicStudy` variant (`npm run v2:prepare:publicStudy`) so the private surface is absent by construction rather than by careful cropping.
